PP REGRIND AUFDERHAAR KUNSTSTOF RECYCLING B.V.

Our PP regrind is processed from flowerpots and has mixed colours. After shaking out all the soil dirt and removing further contaminations, our washing lines clean out the last soil adhesion with cold water. The PP regrind Aufderhaar supplies is best used for extrusion and compounding. Our PP regrind is packed in big-bags which makes it possible us to load shipping containers or semitrailers. Even shipping in a bulk trailer is possible.

Aufderhaar Kunststof Recycling B.V. is a family owned company which produces between 150 to 200 Tons of high quality regrind every week. To make sure our quality meets the costumers requirements we do a check on each big-bag.

With 5 washing lines we are able to respond most recycling situations. Even toll work is a possibility to get your material (PP, HDPE or PS) processed to flakes.
